• Line Tracker Sensor (TCRT5000)

- Basic Principle

- **Code**

```
int lineTracker = 8;  
int led = 2;  
int state = 0;  
void setup()  
{  
    pinMode(lineTracker,INPUT);  
    pinMode(led,OUTPUT);  
}  
void loop()  
{  
    state=digitalRead(lineTracker);  
    digitalWrite(led,state);  
}
```

OR

```
void setup()  
{  
    pinMode(8,INPUT);  
    pinMode(2,OUTPUT);  
}  
void loop()  
{  
    digitalWrite(led,digitalRead(8));  
}
```

- Code

```
int lineTracker = 3;  
int x = 0;  
int y = 0;  
  
void setup()  
{  
    Serial.begin(9600);  
    pinMode(lineTracker, INPUT);  
}  
void loop()  
{  
    x=digitalRead(lineTracker);  
    Serial.print(x);  
    y=analogRead(A0);  
    Serial.print(" ");  
    Serial.println(y);  
}
```

- DC Motor

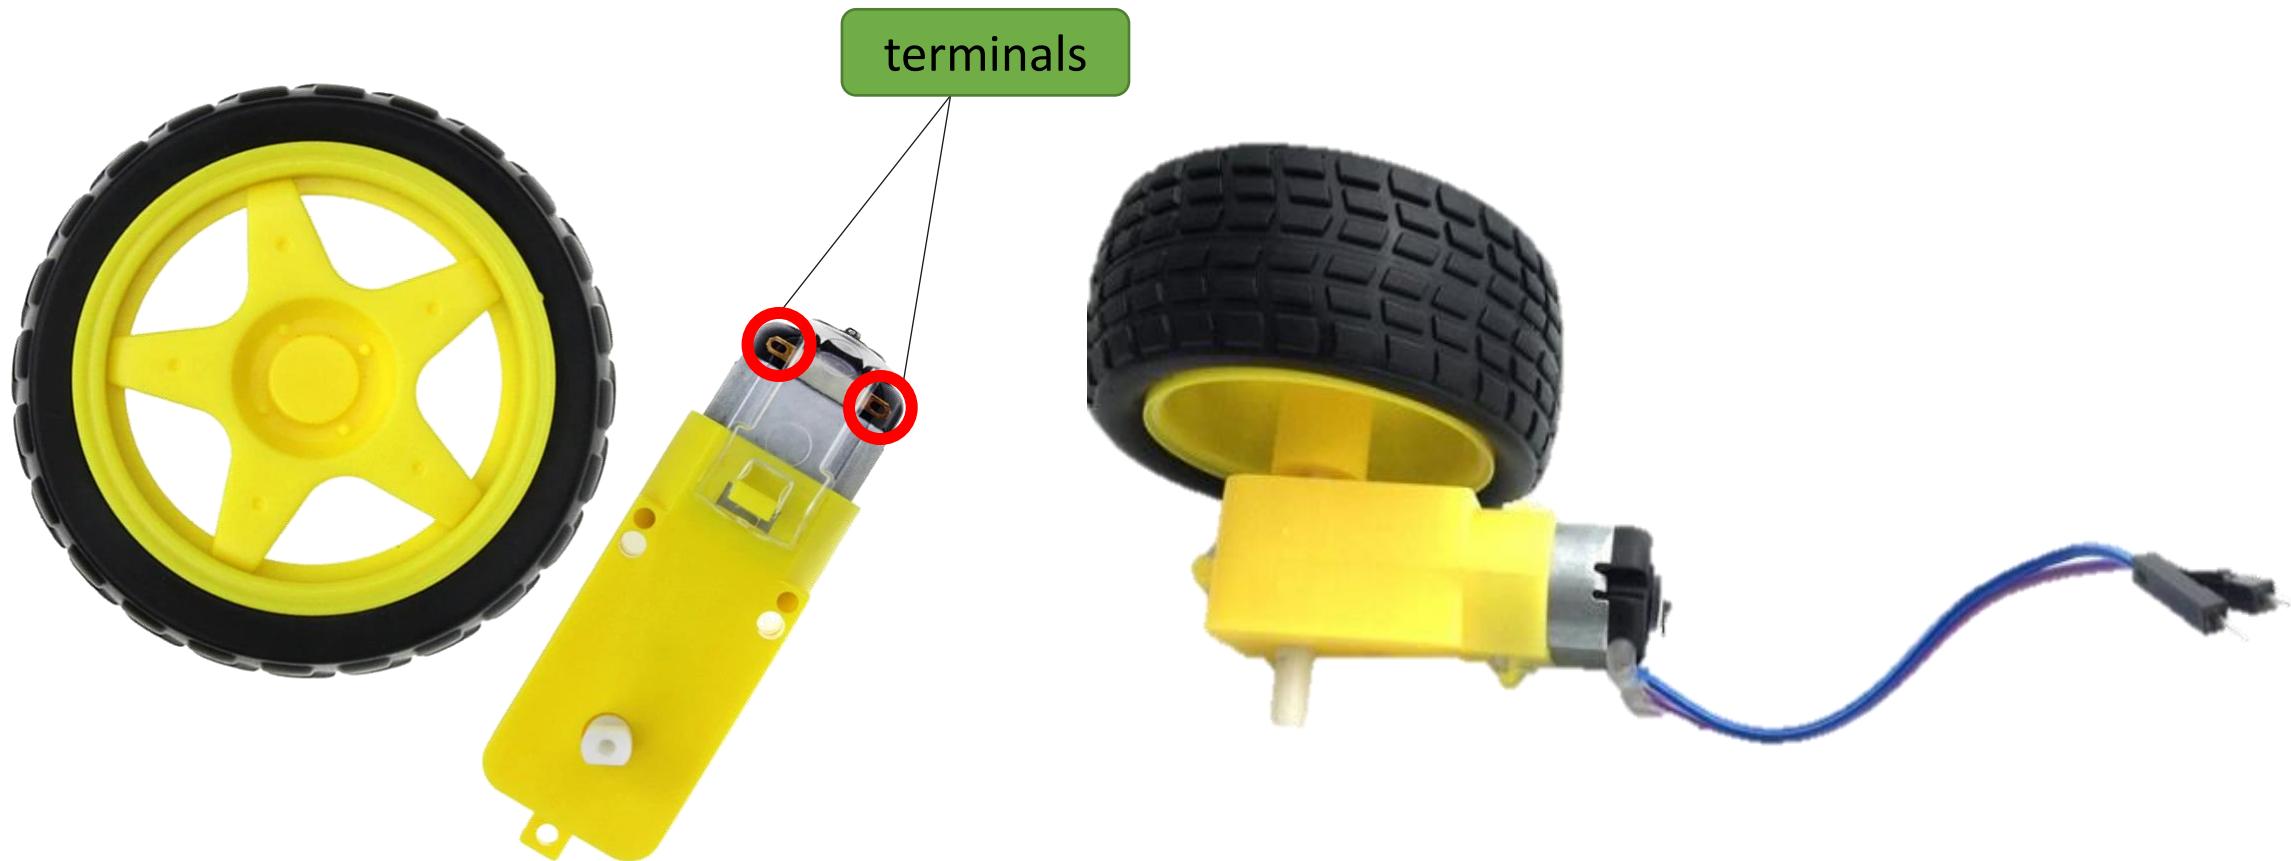

DC Motor is any of a class of rotary electrical motors that converts direct current electrical energy into mechanical energy

• DC Motor Specification

Operating Voltage	3V-12VDC
Maximum Torque	800g/cm max
Gear Ratio	1:48
Load Current	70mA (250mA max. @ 3V)
Weight	29g

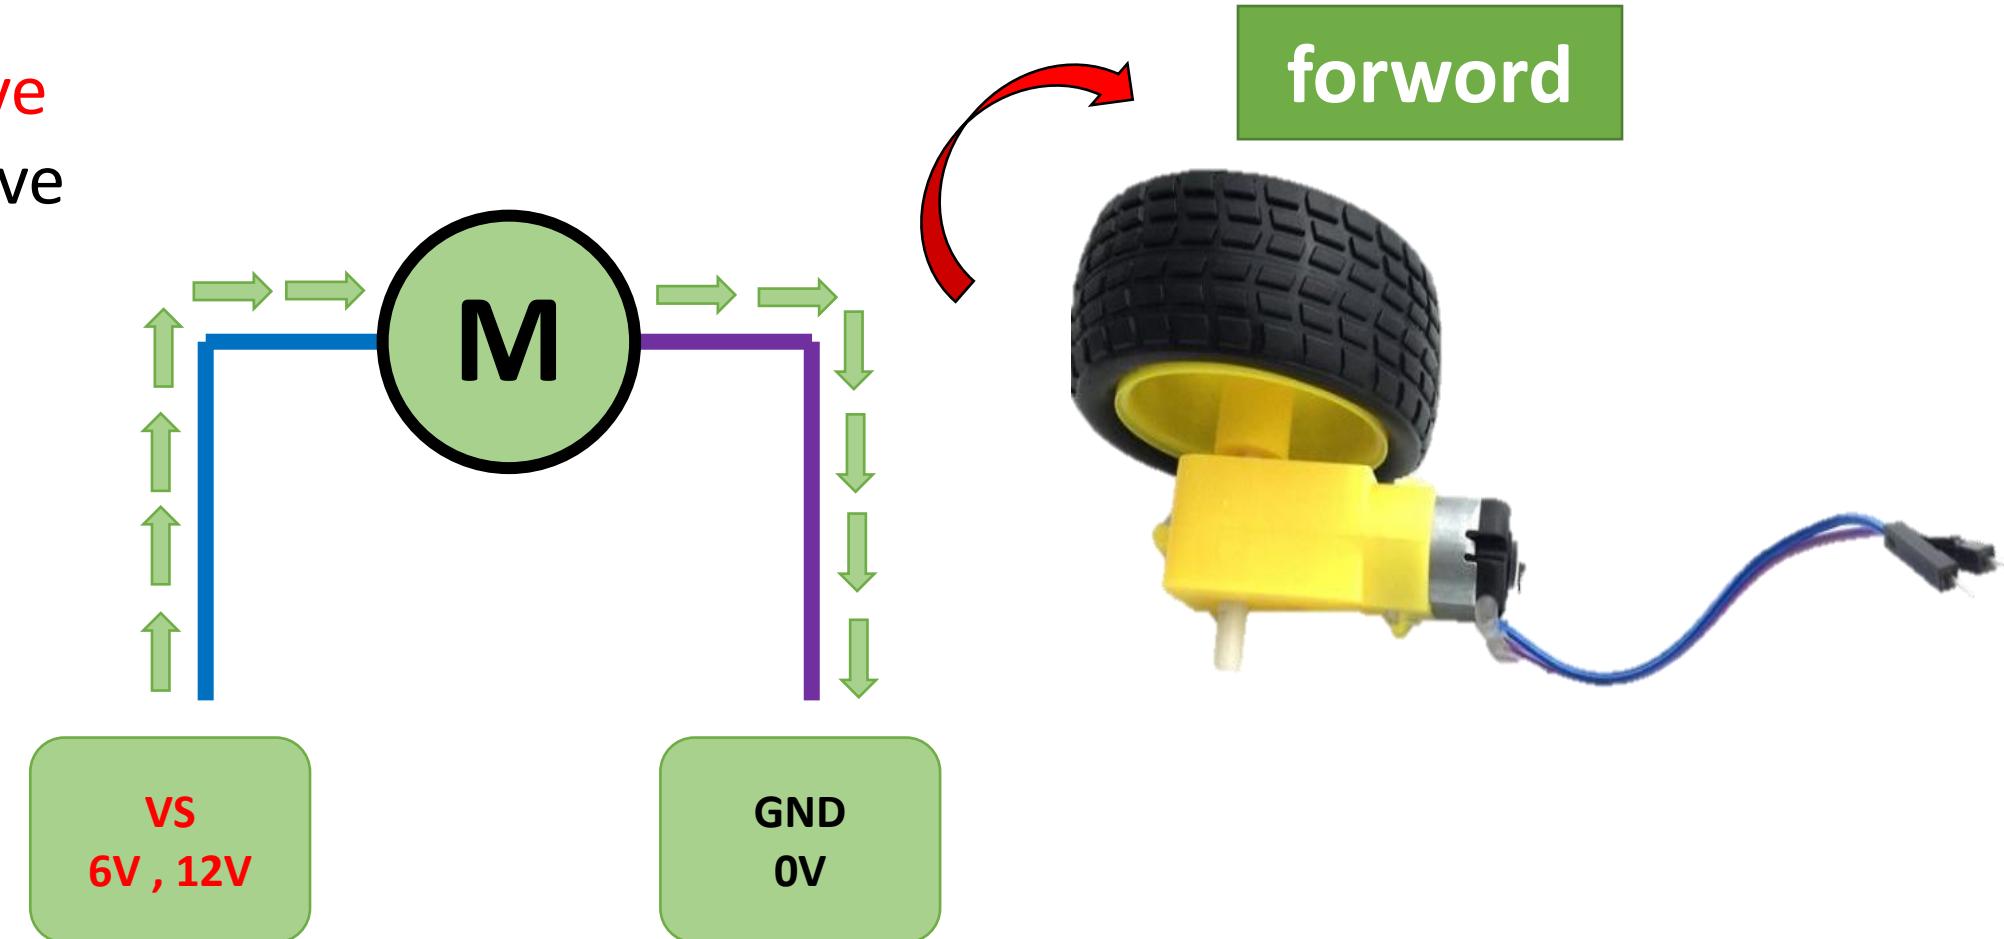

- DC Motor

- Basic Principle

blue → positive

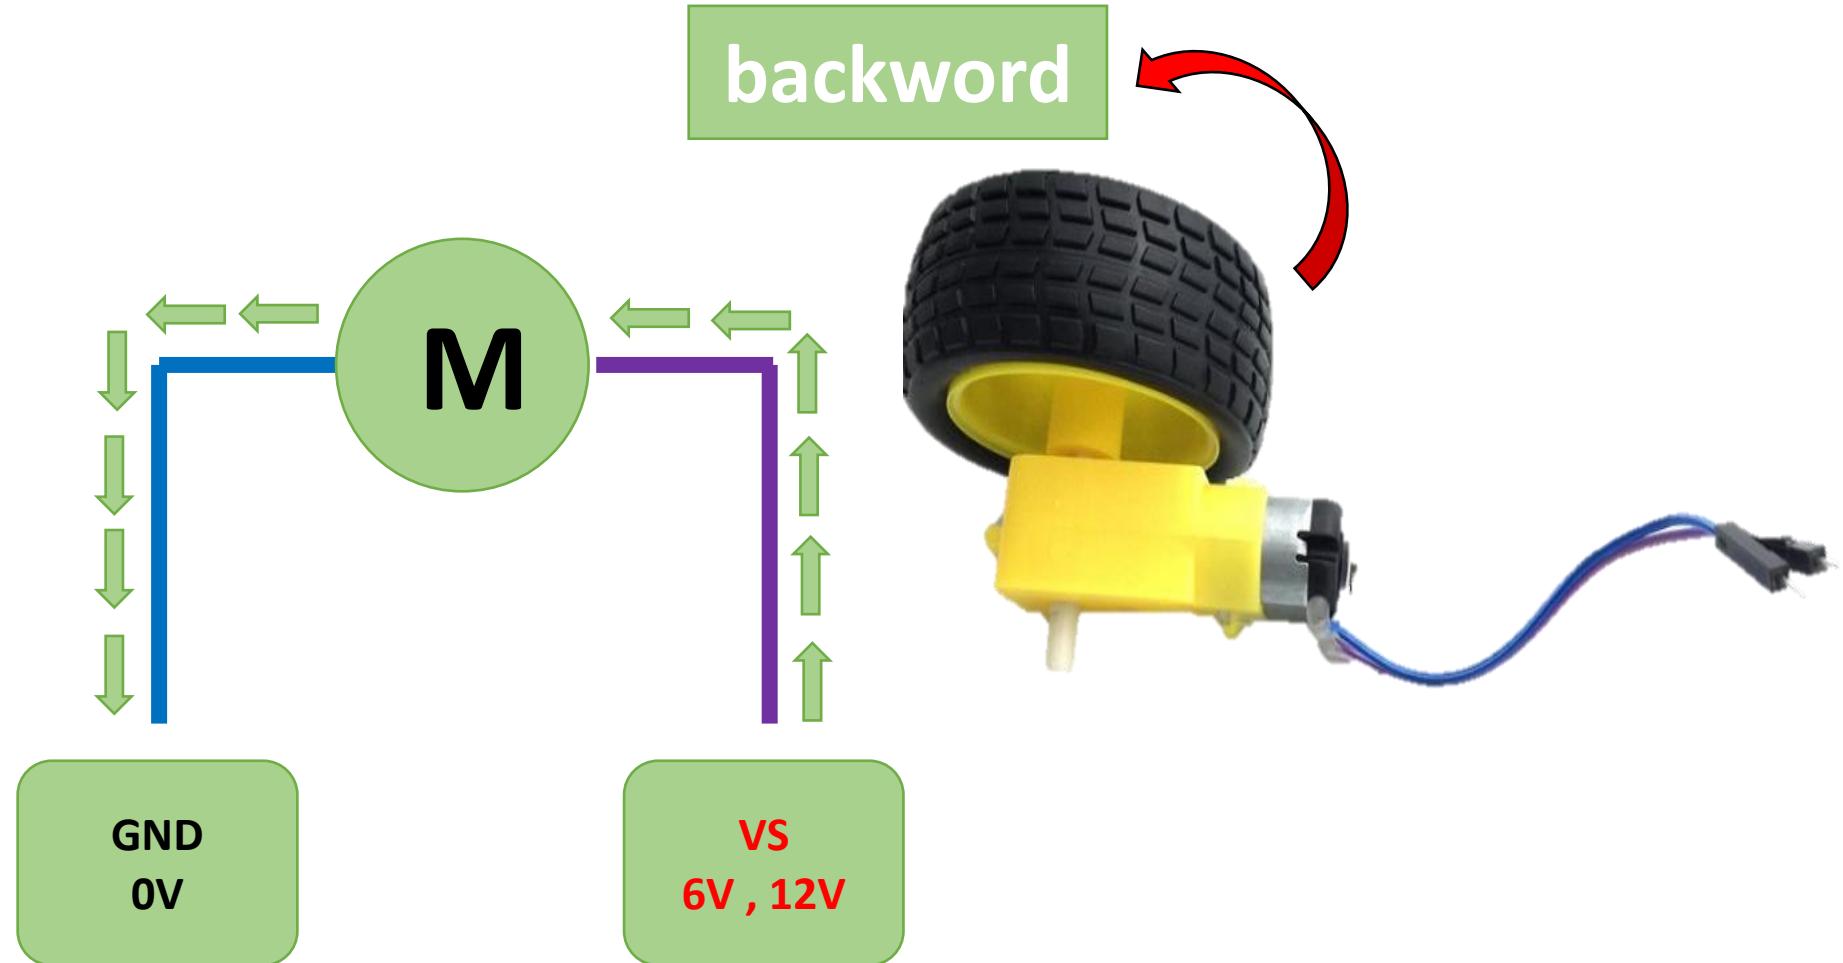

Purple → negative

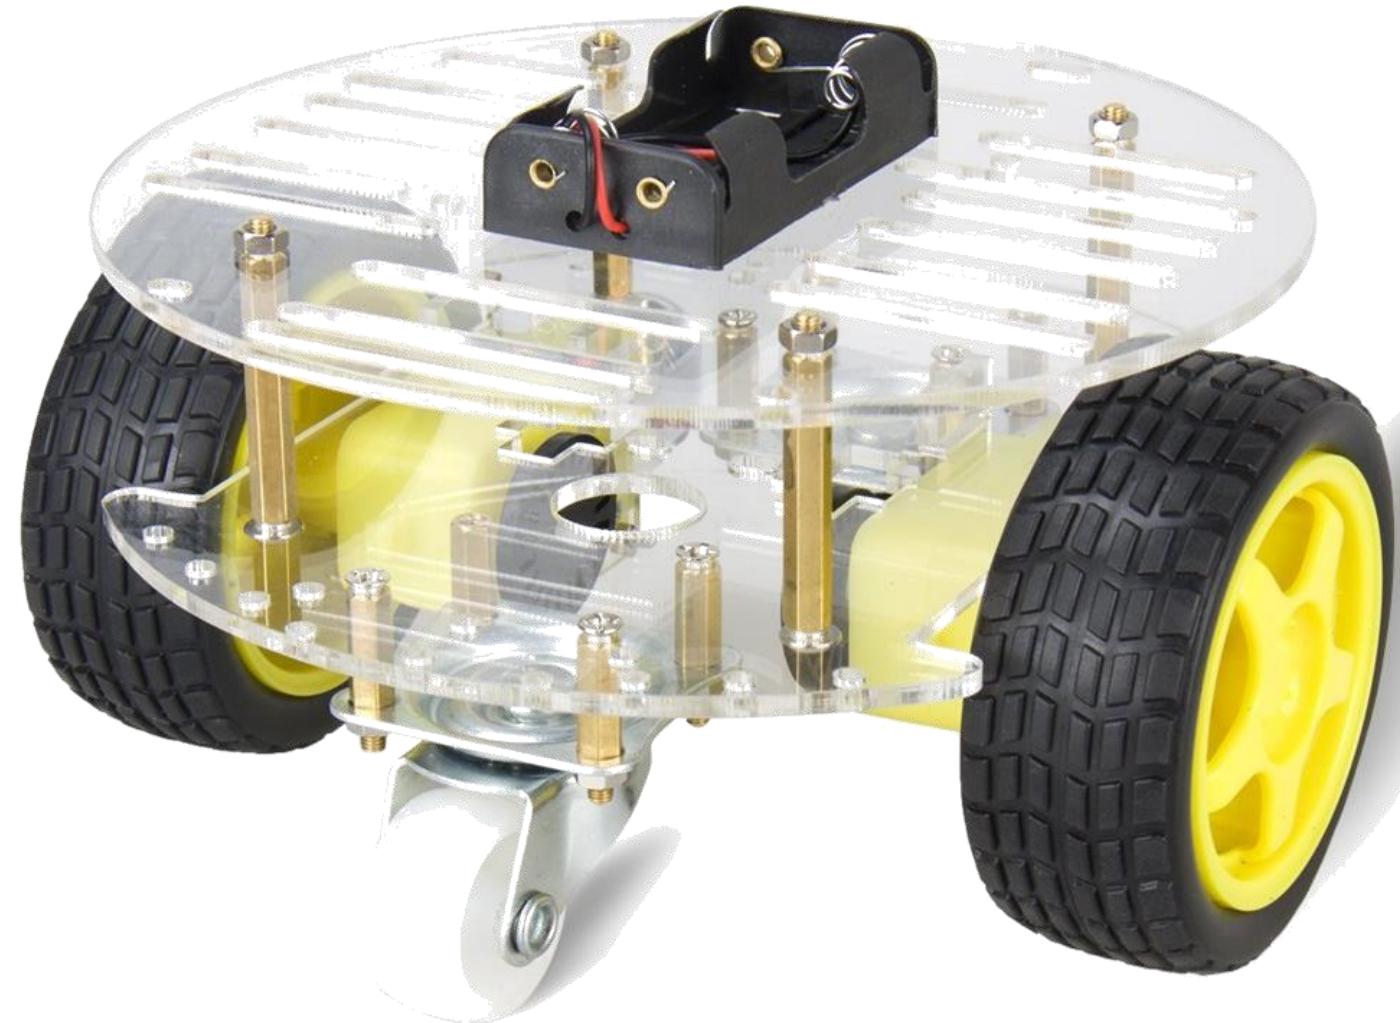

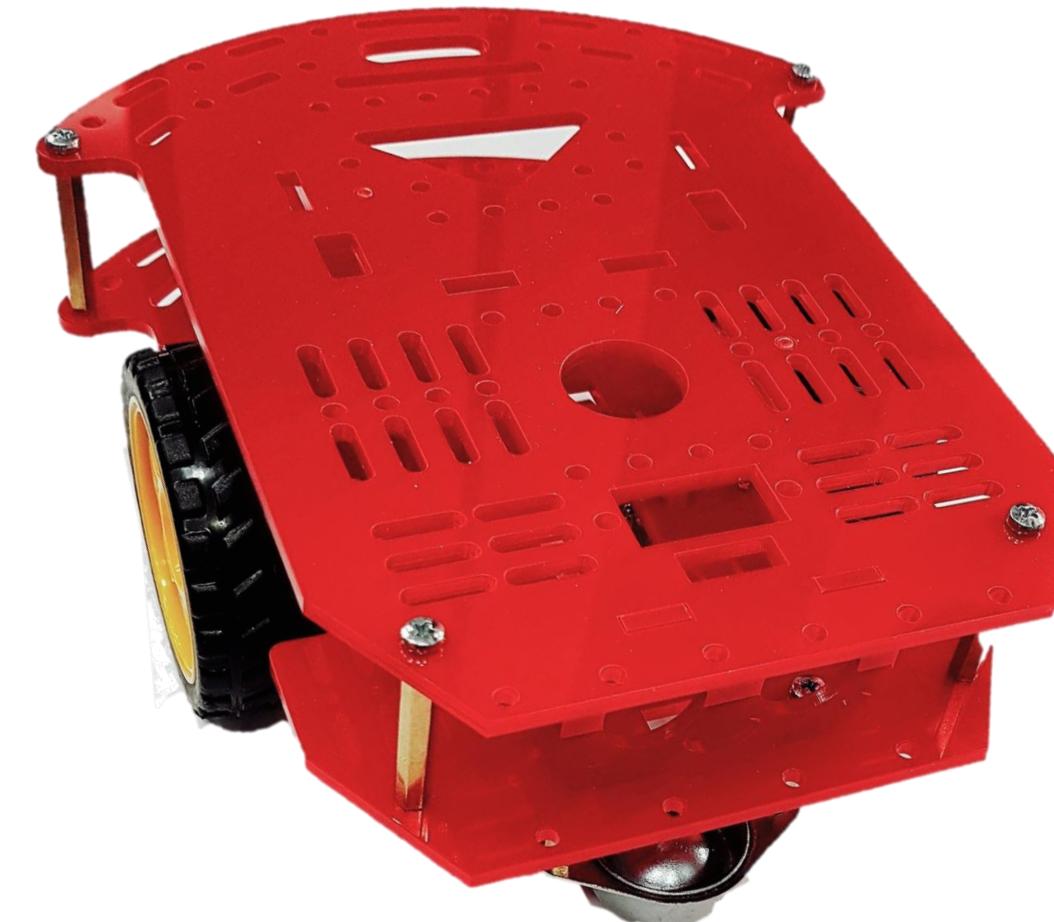

- Basic Principle

- Motor Driver

- What is motor driver and Why do we need it ?

• Motor Driver (l298N)

- **Motor driver** receives signals from the microprocessor and eventually, it transmits the converted signal to the motors.

• Direction Control

we will agree:

car is forward when

blue cable → HIGH signal

purple cable → LOW signal

left motor

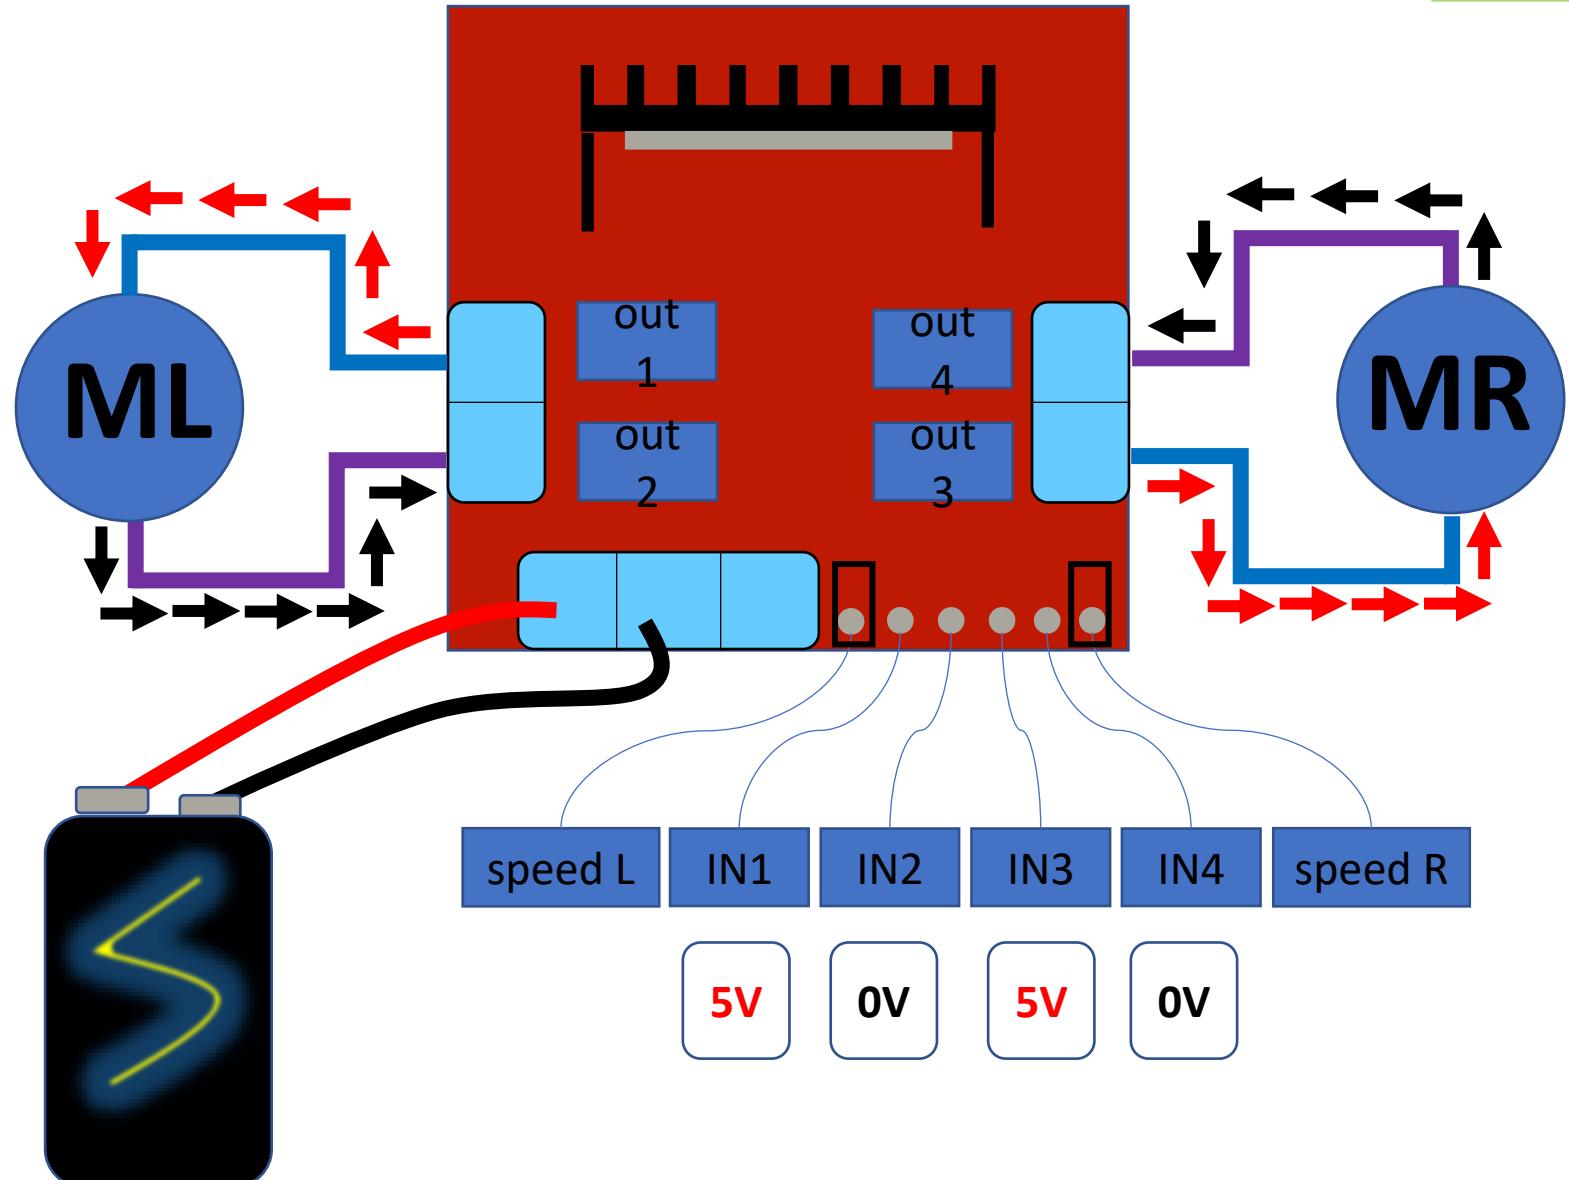

blue cable → out1

purple cable → out2

right motor

blue cable → out3

purple cable → out4

• Direction Control

we will agree:

car is forward when

blue cable → HIGH signal

purple cable → LOW signal

left motor

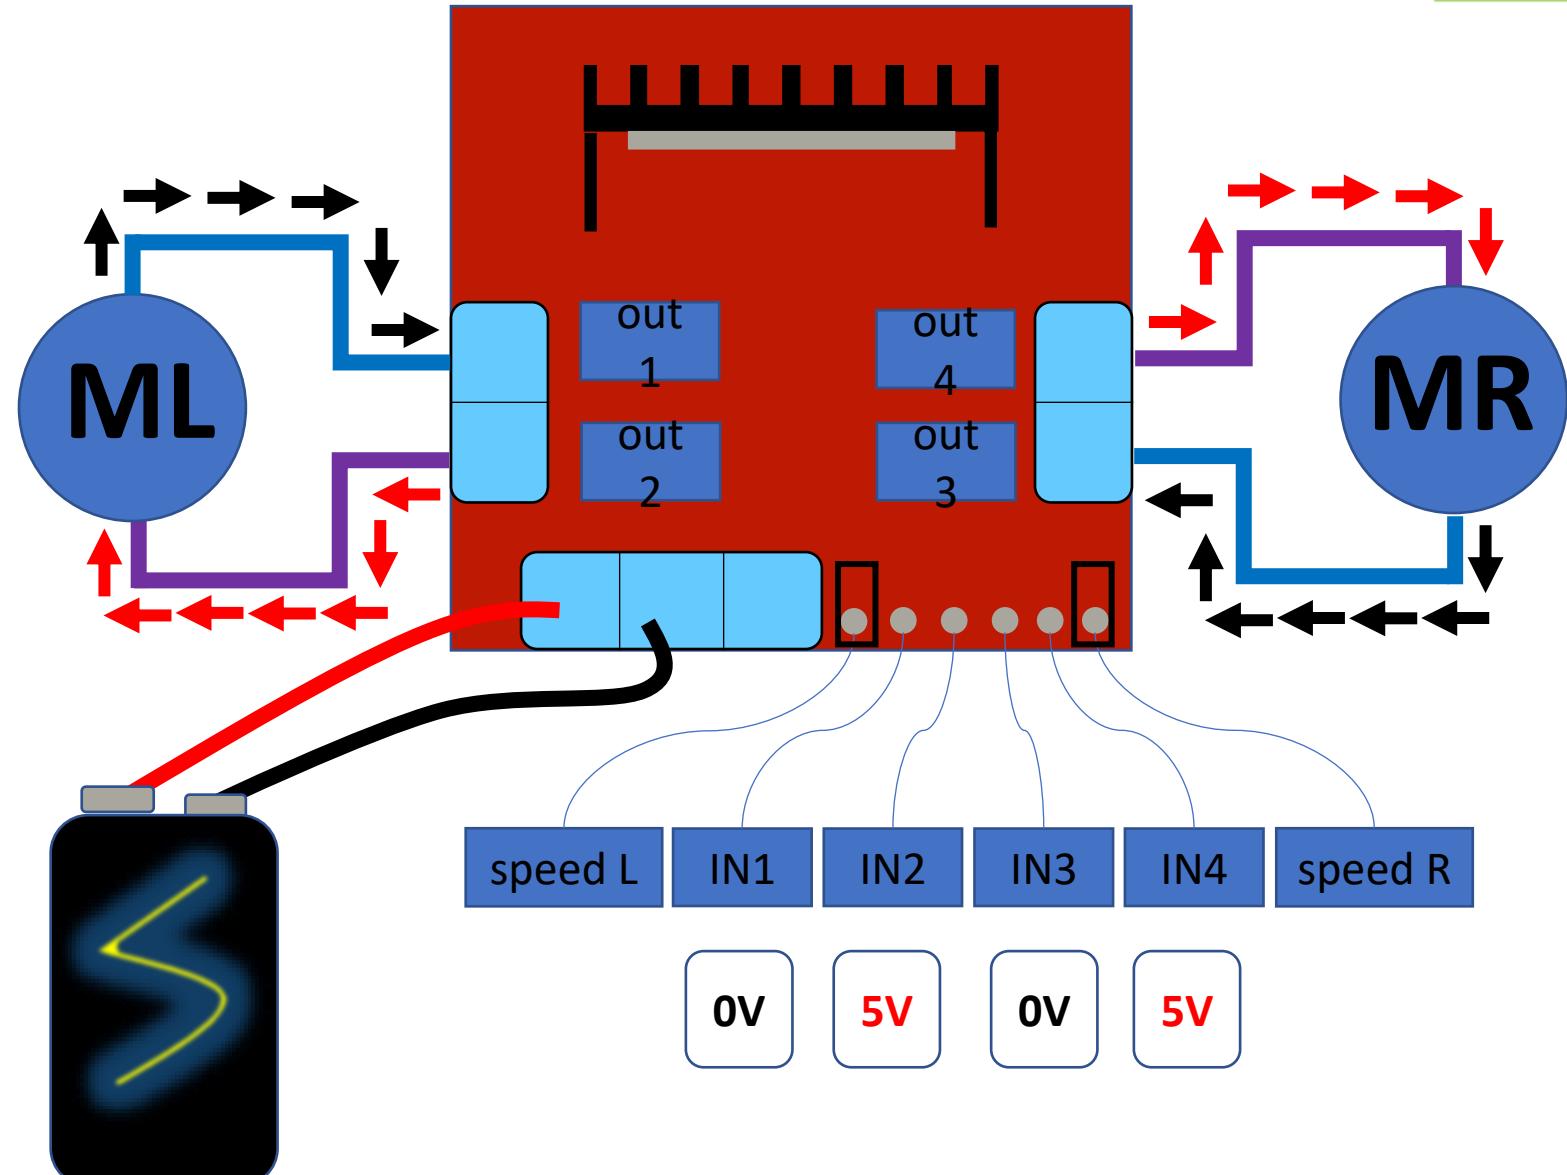

blue cable → out1

purple cable → out2

right motor

blue cable → out3

purple cable → out4
